THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION
EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Claude Purchase on Mar. 3, 2008.

The application has been amended as follows:

Please amend Claim 1 as follows:

A process for characterizing a sample comprising a population of linear macromolecules of interest and a population of long chain branched macromolecules of interest, the process characterized by the steps of:

(a) providing a sample comprising a population of linear macromolecules of interest comprising a select fraction (104) and a population of long chain branched macromolecules of interest comprising a select fraction (103), said select fractions being of similar size, the similar size of the fractions of interest being characterized so that these fractions will co-elute in a size exclusion chromatography experiment optimized so that the fractions are separated by hydrodynamic size and the separation is conducted under temperature and solvent conditions which produce equivalent

results to that obtained when the separation is conducted under isothermal and isocratic conditions;

(b) providing a flow through separating medium (100) and a liquid eluant (101) in which the macromolecules of interest dissolve, the separating medium defining a multiplicity of flow through channels (102), which are small enough in diameter so that when the eluant containing dissolved sample macromolecules of interest is caused to flow under pressure through the channels (102) ~~of the separating medium (100)~~, over a certain linear velocity range, a the select fraction (104) ~~within of~~ the population of the linear macromolecules of interest will elute before a the select fraction (103) of the population of the long chain branched macromolecules of interest whereby separate peak elution volumes (105) and (106) of said fractions of linear macromolecules and long chain branched macromolecules of interest ~~is are~~ established for producing differentiation of the fraction of linear macromolecules from the fraction of long chain branched macromolecules, ~~said select fractions being of similar size, the similar size of the fractions of interest being characterized so that these fractions will co-elute in a size exclusion chromatography experiment optimized so that the fractions are separated by hydrodynamic size, and wherein the separation is conducted under temperature and solvent conditions which produce equivalent results to that obtained when the separation is conducted under isothermal and isocratic conditions;~~

(c) determining said linear velocity range;

Art Unit: 4151

~~(b)~~ (d) introducing ~~a~~ the sample of dissolved linear macromolecules of interest and long chain branched macromolecules of interest into the liquid eluant;

~~(c)~~ (e) flowing the liquid eluant under pressure through the channels of the separating medium at a linear velocity that is within the range specified in ~~step (a)~~ step (c).

whereby the sample macromolecules of interest emerge from the separating medium separated into successive elution volumes of the liquid eluant, characterized by said linear macromolecules of interest eluting (105) before similarly sized long chain branched macromolecules of interest (106); and

~~(d)~~ (f) differentiating the linear macromolecules of interest from the long chain branched macromolecules of interest based on their successive elution volumes established in ~~step (c)~~ step (e).

Claim 11 (cancelled).

Claim 12 (cancelled).

Allowable Claims

2. Claims 1-10 are allowable over the prior art of record.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: The closest prior art of record are:

M.V. Gorenstein, and Y. Brun, WO 99/42489 (herein after Gorenstein); T. A. Chamberlin and H.E. Tuinstra, U.S. Patent 4,775,943 (herein after Chamberlin); H. Yun, S.V. Olesik and E.H. Marti, J. Microcolumn Separations 11:53-61, 1999 (herein after Yun).

The prior art of record is devoted almost entirely to separation of polymers in monolithic or packed columns, and fractionation of polymers in these columns is reported to be determined by their hydrodynamic size or molecular weight. Gorenstein and Chamberlin both teach methods of determining a polymer's molecular weight and intrinsic viscosity law (IVL) with the use of gel permeation chromatography. IVL may reveal branching properties of a polymer. However, both Gorenstein and Chamberlin do not teach or suggest fairly a method for separating linear from long chain branched polymers of similar size. Anomalous separations, in which long chain branched polymers are retained on packed columns longer than expected from calibrations, and are separated from linear polymers of similar size, have been observed by Yun. However, Yun does not teach or suggest fairly conditions necessary for the routine separation of linear from long chain branched macromolecules. The present application overcomes these limitations of the prior art by determining a flow rate (linear velocity) in monolithic columns that will affect separation of linear and branched long chain macromolecules of similar size.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
